Summary

AI/ML Engineer and Python Developer with practical experience in Machine Learning (Scikit-learn) and Generative AI. Proven ability to build scalable Python pipelines, analyze complex datasets, and integrate LLMs to automate workflows and solve diverse business challenges.

Technical Skills

Languages: Python (Pandas, NumPy), SQL.

AI & Machine Learning: Scikit-learn, K-Means Clustering, PCA, Google Gemini API, Genkit AI, Prompt Engineering.

Backend & Frameworks: FastAPI *(or Flask)*, Node.js, Next.js, Streamlit.

Databases & Tools: Git, GitHub, Docker, MongoDB, Firebase, VS Code, Google Colab.

Projects

Cohort-AI | *Python, Scikit-learn, Pandas, Streamlit* GitHub

- Engineered a Python-based unsupervised learning pipeline processing 4-dimensional behavioral data using **Scikit-learn's K-Means clustering**.
- Optimized data ingestion and preprocessing workflows using **Pandas** to ingest, clean, and cluster 500+ student records in under 2 seconds.
- Deployed the machine learning model into a modular **Streamlit** web application, implementing PCA for real-time dimensionality reduction and visualization.

ClaimGuard: AI Fraud Analytics | *Python, Google Gemini API, Genkit AI* GitHub

- Architected an automated Python data pipeline that ingests raw CSV claims and performs zero-shot fraud classification via the **Google Gemini SDK**.
- Engineered backend data handling logic for high-throughput datasets (successfully tested on 100,000+ rows), maintaining real-time performance during LLM inference.
- Developed a custom Python interpretability module to parse complex LLM JSON outputs and extract semantic risk factors (e.g., "Inconsistent History").

DocGen AI (LLM Orchestration) | *Python, Gemini 2.5 Flash, Prompt Engineering* GitHub

- Developed a Python-driven LLM orchestration engine, reducing automated document drafting latency by 80% through optimized API payload management.
- Programmed strict **Native JSON Schema** enforcement within the Python backend to guarantee deterministic, machine-readable outputs from the generative model.
- Engineered a sliding window context manager (simulated RAG) in Python to maintain state and narrative continuity across multi-prompt generation tasks.

Certificates

The Ultimate Job Ready Data Science Course - *CodeWithHarry* (2026) Certificate

Generative AI with IBM Watsonx - *IBM* (2025) Certificate

Applied Machine Learning in Python - *University of Michigan* (2023) Certificate

SQL (Basic) - *HackerRank* (2024) Certificate

Education

Vellore Institute of Technology *Bhopal, Madhya Pradesh | 2026*

Bachelor of Technology in Computer Science • CGPA: 7.81 / 10.0
