Summary

Data Science enthusiast with practical experience in **Machine Learning (Scikit-learn)** and **Generative AI**. Proven ability to analyze complex datasets using **K-Means Clustering** and **PCA** to drive actionable insights. Proficient in Python, SQL, and building AI-integrated solutions for EdTech and FinTech.

Technical Skills

Core Languages: Python (Pandas, NumPy), SQL, Java.
Machine Learning: Scikit-learn, K-Means Clustering, PCA, Regression, Decision Trees.
AI & GenAI: Gemini 2.5 Flash, Genkit AI, Prompt Engineering, JSON Schema.
Data Visualization & Tools: Streamlit, Matplotlib, Seaborn, Google Colab, Excel.

Projects

- Cohort-AI | Python, Scikit-learn, Streamlit, K-Means Clustering, PCA

GitHub

 - Built an AI-driven grouping tool that reduces student isolation by clustering learners into optimal study pods based on schedule, pace, and media preference.
 - Implemented K-Means Clustering and Principal Component Analysis (PCA) to process 4-dimensional behavioral data, replacing random assignment with statistically compatible grouping.
 - Engineered a modular Streamlit dashboard featuring real-time cluster visualization and a custom CSV ingestion pipeline, capable of organizing 500+ students in under 2 seconds.
- ClaimGuard | Genkit AI, Gemini API, Automated Pipeline

GitHub

 - Engineered a zero-shot fraud classification pipeline using Genkit and Google Gemini API, automating the analysis of raw CSV data to assign granular fraud probability scores (0.0–1.0).
 - Optimized data ingestion architecture to handle high-throughput datasets, successfully testing and visualizing 100,000+ rows while maintaining real-time dashboard performance.
 - Implemented Model Interpretability logic to extract semantic risk factors (e.g., "Inconsistent History"), providing plain-language explainability comparable to traditional feature importance analysis.
- DocGen AI Platform | Gemini 2.5 Flash, JSON Schema, Few-Shot Prompting, Firebase

GitHub

 - Architected an LLM orchestration pipeline using Gemini 2.5 Flash, automating content synthesis and reducing drafting latency by 80% through optimized prompt chaining.
 - Engineered a context-aware generation engine implementing Native JSON Schema Enforcement to ensure deterministic structural outputs and high semantic consistency.
 - Implemented Few-Shot Prompt Templates and a sliding context window (simulated RAG) to preserve narrative continuity and mitigate model hallucinations during multi-section document generation.

Certificates

- The Ultimate Job Ready Data Science Course - CodeWithHarry (2026)

Certificate
- Generative AI with IBM Watsonx - IBM (2025)

Certificate
- Applied Machine Learning in Python - University of Michigan (2023)

Certificate
- SQL (Basic) - HackerRank (2024)

Certificate

Education

Vellore Institute of Technology

Bhopal, Madhya Pradesh | 2026

Bachelor of Technology in Computer Science • CGPA: 7.81 / 10.0
